With new Lens Correction features and new advanced High Pass tool, your images are in good hands. Plus, if you're looking for more speed and precision, Clean up Brushed Sepia adds variable brush diameter and its own global adjustment sliders to the Brush tool. There's also a new and ridiculously powerful feature that lets you remove objects from your photos, including people, dogs, and whatever else is hiding in the background. The new software is also supplemented by three new tools for color tweaking. For this purpose, Photoshop Elements 20.0 brings five new, exciting color-tweaking tools, which allows you to individually and simultaneously adjust RGB and HSL (Hue, Saturation, and Light) values. If you want to do a more extensive color correction in less steps, you can use a new sliders to adjust the hue and saturation of individual colors. This tool will likely be well received, then. The Touch Edit Tool is an excellent addition particularly if you are working on large image, or the tablet features aren't an option in your production. It allows you to edit an entire document - or even a selection range - using gestures on the screen.
